

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Mauritius. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.
What educational path would you recommend for me?

Thanks for sharing a bit about yourself — that's a great place to start! You're at a really important point in your life, and Denmark offers many strong and flexible options for education after primary school (9th or 10th grade).

Since you're 16, you've likely just completed **9th or 10th grade**, depending on your school and situation. Here are the main educational paths you can consider in Denmark, along with some advice tailored to your background and options:

1. Gymnasiale uddannelser (Upper Secondary Education)

These prepare you for higher education (university or academy professions). If you're interested in academic studies and possibly a university degree in the future, this is a strong path.

Main options:

- **STX (Almen studentereksamen)** – general upper secondary with a broad academic focus (sciences, humanities, social studies, languages).
- **HHX (Højere handelseksamen)** – focused on business, economics, marketing.
- **HTX (Højere teknisk eksamen)** – focused on science, technology, and engineering.
- **HF (Højere forberedelseksamen)** – shorter (2 years), more practical; often for those who didn't go directly from 9th grade to STX/HHX/HTX.

✓ Recommended if:

- You enjoy school and academic subjects.
- You think you might want to go to university or higher education later.
- You're interested in broader career options (law, medicine, tech, business, etc.).

2. Erhvervsuddannelser (Vocational Education and Training - EUD)

This is for you if you want to start working earlier or prefer practical/hands-on learning. You learn both in school and through apprenticeships in companies.

You can become:

- Electrician
- Carpenter
- Hairdresser

- Chef
- Mechanic
- IT support, etc.

✓ Recommended if:

- You prefer practical learning.
- You want to earn money while studying.
- You like the idea of having a trade or skill early on.

💡 *Note:* You can still pursue higher education from some vocational programs later, especially if you combine it with **EUX** (see below).

✂ 3. EUX (Hybrid of Academic + Vocational)

EUX combines vocational training with elements of gymnasiale uddannelser. You get a vocational qualification **plus** the ability to continue to higher education later.

✓ Recommended if:

- You want a job-ready skill (like from EUD) **but** want to keep your university options open too.
- You're willing to work hard (EUX is demanding but rewarding).

🌍 Other Factors to Consider

- **Language skills:** You're fluent in Danish, which is great. If you speak or want to improve English or French (common in Mauritius), you could focus on that too.
- **Cultural background:** If your Mauritian background inspires you, maybe international studies, languages, or business could be a fit.
- **Your interests:** What subjects do you enjoy most? Math, science, arts, social studies? That's a big clue.

👣 What to do next

1. **Try a brobygningforløb (bridging course)** – You can try short visits to different schools to see what fits.
2. **Visit open house events** at local gymnasier or vocational schools.
3. **Talk to a UU-vejleder (youth education counselor)** – They are very helpful and free.
4. **Think long-term** – You don't need to have everything figured out, but think about whether you want a more academic or practical path for the next few years.

🕒 My general advice for you:

If you're not sure yet, **STX or HF** might be the safest path — it keeps doors open. But if you know you like working with your hands or want to start earning sooner, **EUD or EUX** could be a smart, solid choice. Want to tell me a bit more about your interests, subjects you enjoy, or what kind of work you'd like to do one day? I can give a more personal recommendation based on that.
