

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Micronesia (Federated States of). I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in Danish.
What educational path would you recommend for me?

That's a great question, and it's excellent that you're thinking ahead about your future. Since you've just finished primary school in Denmark and are fluent in Danish, you have several strong options available to you in the Danish education system. I'll outline your main choices and some things to think about when deciding what path fits you best.

Main Educational Paths After Primary School in Denmark

At around age 16, most Danish students choose between these two main types of upper secondary education:

1. Gymnasiale uddannelser (General Upper Secondary Education)

These are more academically oriented and prepare you for higher education (e.g., university):

- **STX (Alment gymnasium)** – Broad focus on science, humanities, and social sciences.
- **HHX (Handelsskole)** – Focus on business, economics, and international trade.
- **HTX (Teknisk gymnasium)** – Focus on science, technology, and innovation.
- **HF (Højere Forberedelseseksamen)** – Shorter, more flexible option (2 years), often for students who want a quicker route to higher education or a more mature environment.

Best for you if:

You enjoy academic subjects and think you might want to go to university one day (e.g., become a teacher, engineer, nurse, lawyer, or researcher).

2. Erhvervsuddannelser (Vocational Education and Training - EUD)

These are more hands-on and prepare you for specific jobs through a mix of school and apprenticeships.

Examples:

- Electrician
- Carpenter
- Hairdresser
- Chef
- IT support
- Healthcare assistant

You usually start with a basic course at a vocational school and then enter a paid internship or apprenticeship with a company.

✅ **Best for you if:**

You prefer learning by doing, want to start working sooner, or are interested in a skilled trade or practical profession.

🧠 **How to Decide?**

Ask yourself a few questions:

- Do I enjoy academic learning or practical work more?
 - Do I want to go to university later, or start working sooner?
 - Am I interested in areas like business, science, health, design, or IT?
 - Do I like solving problems, working with people, or creating things?
-

🌍 **Extra Tip: Use Your Background**

Being bilingual and having Micronesian heritage is a strength. In the long run, this could open doors in:

- **International business or diplomacy** (HHX could be great)
 - **Language or cultural education** (STX or HF)
 - **Tourism or global NGOs**
 - **Digital work (like programming or media)** (HTX or vocational education in IT)
-

🕒 **Suggestion Based on Your Profile**

Since you're fluent in Danish, have a multicultural background, and just finished primary school, here's a balanced recommendation:

- If you're curious and open to university later: **STX** or **HHX**
 - If you're more practical and career-oriented: **Vocational Education in IT, Healthcare, or Technical trades**
-

💛 **Next Steps**

- Visit your local **Uddannelsesvejleder (educational counselor)** – they're very helpful and free.
 - Attend **open house events** at schools near you.
 - Consider doing a short **praktik (internship)** to test your interests.
-

If you tell me more about your interests (e.g., favorite subjects, what you enjoy doing), I can help tailor the recommendation even more.
