

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Myanmar. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thanks for sharing your background — it's great that you're thinking carefully about your next steps after primary school (which in Denmark typically means completing **9th grade**).

Since you're 16, fluent in Danish, and based in Denmark, you now have a few common **educational options** after primary school. Here's a breakdown of your **main paths**, along with advice based on your interests, goals, and background:

🎓 Main Educational Paths in Denmark (after 9th or 10th grade)

1. STX (Almen studentereksamen)

- **Focus:** General academic subjects – Danish, math, science, languages, social science, etc.
- **Length:** 3 years
- **Best for:** Students aiming to go to **university**, especially in humanities, social sciences, natural sciences, or general academic degrees.
- **Pros:** Keeps your options open. Recognized everywhere.

2. HTX (Teknisk studentereksamen)

- **Focus:** Technology, science, innovation, engineering.
- **Length:** 3 years
- **Best for:** Students interested in **science, IT, health tech, engineering**.
- **Pros:** Good preparation for technical university programs.

3. HHX (Handelsstudentereksamen)

- **Focus:** Business, economics, marketing, international trade.
- **Length:** 3 years
- **Best for:** Students interested in **business, entrepreneurship, or finance**.
- **Pros:** Good for business university degrees or starting your own business.

4. EUX

- **Focus:** Combines vocational education with an academic upper secondary exam.
- **Length:** 4–5 years (but gives you both a studentereksamen *and* vocational skills).
- **Best for:** Students who want **both practical job skills and access to higher education**.

- **Pros:** Very flexible. You can become a skilled worker *and* apply to university.

5. EUD (Erhvervsuddannelse)

- **Focus:** Vocational training – carpentry, electrician, hairdressing, cook, mechanic, etc.
- **Length:** Varies (2–4 years depending on the field).
- **Best for:** Students who want to **work with their hands, get a job quickly**, or follow a specific trade.
- **Pros:** Paid internships and high job security in many areas.

How to Choose What's Best for You

Here are some questions to help guide your decision:

1. Do you want to go to university?

- If **yes**: Choose STX, HHX, HTX, or EUX.
- If **not sure**: EUX is a safe path with flexibility.
- If **no**: EUD can be a great route into work quickly.

2. What subjects do you enjoy?

- **Languages, literature, history** → STX
- **Math, physics, biology, tech** → HTX
- **Business, economy, marketing** → HHX
- **Working hands-on or in a trade** → EUD or EUX

3. Do you want a mix of academic and practical experience?

- EUX gives you both.

Example Recommendations Based on Background

You have a **multicultural background**, are fluent in Danish, and just finished school — that's a strong position! Some tailored ideas:

- If you're **interested in international business**, marketing, or entrepreneurship: **HHX** could be perfect.
- If you're curious about **science or tech**, and want to maybe work with health tech or engineering: **HTX**.
- If you're not 100% sure, and want to keep doors open: **STX** or **EUX** (especially good if you're also interested in working while studying).

Final Tip

You can also take a **10th grade year** (10. klasse) if:

- You want more time to decide.
 - You want to improve grades.
 - You want to mature before choosing.
-

If you tell me more about:

- Your interests (e.g. do you like science, working with people, being creative?)
- Your future dreams (e.g. doctor, engineer, business owner, artist?)
- Whether you want to study at university or get a job after school

... I can give you a more personal recommendation 😊
