

Uddannelsesmuligheder i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from North Macedonia. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

That's great that you're already fluent in Danish and have completed primary school in Denmark! At 16, you're at a key point in your education where you get to choose a direction that can shape your future — both in terms of career and personal development.

In Denmark, after primary school (folkeskole), you typically choose between different **youth education programmes**. Here are the main options, along with guidance based on your background and interests:

1. Gymnasiale uddannelser (General Upper Secondary Education)

If you're interested in continuing on to university later, this is usually the best path.

Options:

- **STX (Alment gymnasium)** – Broad academic focus (sciences, languages, humanities). Good for university prep.
- **HHX (Handelsskole)** – Focus on business, economics, and marketing.
- **HTX (Teknisk gymnasium)** – Focus on science, technology, and engineering.
- **HF (Højere forberedelseseksamen)** – A 2-year academic program, often used by those who want a shorter path or had challenges in school.

Recommended if:

- You like academic subjects and think you might want to go to university.
- You enjoy learning languages, sciences, or economics.
- You're not yet sure what career you want and want to keep your options open.

2. EUD/EGU (Vocational Education & Training – Erhvervsuddannelse)

If you want to **learn a trade and start working sooner**, this path is ideal.

You can become a:

- Electrician
- Carpenter
- Mechanic
- Hairdresser

- Chef
- IT supporter
- Health care assistant
- ...and many other practical professions.

It usually includes **a mix of school and apprenticeship** at a workplace.

Recommended if:

- You prefer hands-on learning over classroom theory.
- You want to enter the job market sooner.
- You already have an idea of what kind of practical job you'd enjoy.

What to consider:

- **Interests:** Do you enjoy academic subjects or practical tasks more?
- **Future goals:** Do you think you want to go to university, or start working sooner?
- **Strengths:** Are you good at math, languages, working with your hands, helping people?

My recommendation for you:

Since you've just finished folkeskole and are fluent in Danish, you're well-prepared for both academic and vocational paths. Unless you already know you want to be in a hands-on profession (like electrician or chef), I'd recommend starting with **STX or HHX**, depending on whether you're more interested in general academic subjects or business/economics.

This keeps your options open — you can always go to university, but also switch paths later if you change your mind.

If you tell me more about your interests, hobbies, or subjects you enjoy, I can give a more specific recommendation tailored just to you.
