

Uddannelsesvalg efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Norway. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in Danish. What educational path would you recommend for me?

Thanks for sharing that! Since you're 16, have just completed primary school in Denmark, and are fluent in Danish, you're now at a key decision point where you can choose between different upper secondary education options. The right choice depends on your interests, goals, and how you prefer to learn. Here's an overview of your main options in the Danish education system, and some guidance:

Main Educational Paths After Primary School in Denmark

1. Gymnasiale uddannelser (General Upper Secondary Education)

This path prepares you for university and higher education. Great if you're academically inclined or unsure what you want to specialize in yet.

- **STX (Studentereksamen)** – Broadest option, includes humanities, sciences, and social sciences.
- **HHX (Handelsskolen)** – Focus on business, economics, and marketing.
- **HTX (Teknisk Gymnasium)** – Focus on science, technology, and innovation.
- **HF (Højere Forberedelseseksamen)** – 2-year academic program, more practical and flexible.

 Recommended if you think you might want to go to university later, even if you're not sure in what.

2. Erhvervsuddannelser (Vocational Education and Training – EUD)

This combines school and apprenticeships with real-world work experience.

- Wide range: from carpentry and mechanics to hairdressing and IT support.
- Takes 3-5 years depending on the program and specialization.
- You get a qualification and job experience – and can often start working right after.

 Recommended if you prefer practical learning or want to start working sooner.

3. EUX – Combination of Vocational and Academic

A mix of EUD and gymnasial education. You get both a vocational qualification and eligibility to go to university.

 Recommended if you want both career options and academic opportunities.

With Your Norwegian Background

Being fluent in Danish and having Norwegian parents is a great advantage. The two education systems are compatible, so if you ever want to study or work in Norway, most Danish qualifications are recognized there – especially STX, HHX, or HTX.

What to Think About

Here are a few questions to ask yourself to help decide:

- Do you enjoy academic subjects and studying?
 - Do you prefer hands-on, practical work?
 - Are you interested in a specific field (e.g. business, technology, healthcare)?
 - Do you want to go to university one day?
 - Would you like to travel or work abroad in the future?
-

My Suggestions Based on Common Paths

If you're not sure yet what you want:

→ **STX** is a safe and flexible choice. It keeps all doors open.

If you're interested in business or international work:

→ **HHX** is great. It focuses on economics, marketing, languages, etc.

If you're into science or engineering:

→ **HTX** prepares you well for those paths with lots of labs and tech focus.

If you're a hands-on learner or want a skilled job quickly:

→ **EUD** in a field you like (e.g. electrician, chef, mechanic, programmer).

If you want both practical skills and academic qualifications:

→ **EUX** gives you the best of both worlds.

If you'd like, I can help you explore specific programs near where you live in Denmark or talk more about your interests to narrow it down. What do you enjoy learning or doing the most?
