

Uddannelsesmuligheder i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Panama. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

That's a big and exciting step—congrats on finishing primary school! 🎓 Since you're 16 and just finished primary school in Denmark, you're probably choosing between the main upper secondary education paths. Here's a breakdown of your options and some guidance based on your background and future goals:

🇩🇰 Danish Education Options After Primary School (Folkeskolen)

In Denmark, after 9th or 10th grade, you can choose one of the following main paths:

1. STX (Almen Studentereksamen) – General Upper Secondary School

- Focus: Broad academic subjects (science, languages, social sciences, etc.)
- Duration: 3 years
- Good for: If you want to go to university afterward
- Recommendation: Ideal if you're still exploring interests or aiming for an academic career

2. HHX (Higher Commercial Examination Programme)

- Focus: Business, economics, marketing, languages
- Duration: 3 years
- Good for: Business-minded students or if you're thinking about international trade or economics (could be interesting given your Latin American roots)
- Recommendation: Could be a great match if you like numbers, business, and languages

3. HTX (Higher Technical Examination Programme)

- Focus: Technology, science, engineering
- Duration: 3 years
- Good for: If you enjoy STEM (science, technology, engineering, math)
- Recommendation: Go for this if you're curious about building, coding, machines, or biology

4. EUD (Vocational Education and Training)

- Focus: Learning a skilled trade (carpentry, electrician, hairdresser, etc.)

- Duration: 2–4 years (often includes apprenticeship)
- Good for: If you prefer hands-on work and want to enter the job market quickly
- Recommendation: Great option if you want to start working sooner and like practical learning

5. EUX (Combination of Vocational + Academic)

- Combines: Vocational training + subjects qualifying you for higher education
- Duration: 4–5 years
- Good for: Getting a trade + the option to study at university later
- Recommendation: Great flexibility if you're unsure whether to work or study later

Things to Think About

Here are some questions that might help you decide:

- Do you prefer **theoretical** or **practical** learning?
- Are you interested in **university**, or would you rather start **working earlier**?
- Do you enjoy **math and science**, **languages and culture**, or **hands-on work**?
- Do you see yourself staying in Denmark or maybe working in **international settings**, possibly related to **Panama or Latin America**?

Example Pathways (based on possible interests)

Interest Area	Suggested Path	Why?
International/business	HHX or STX	Languages + economics could open up global career options
Tech/science	HTX	Great for future engineers or IT specialists
Hands-on/trade	EUD or EUX	Start working earlier, with strong job market demand
University later, general	STX	Keeps most doors open while exploring interests

Personal Touch

Since you're bilingual (or even trilingual), and have a multicultural background, you may have a strong advantage in:

- **International business**
- **Translation/languages**
- **Tourism/hospitality**
- **Global politics or development**

HHX or STX with strong language and social science tracks might be especially valuable if you want to stay connected to both Denmark and Panama in your future work.

Next Step

If you're still unsure:

1. **Talk to a guidance counselor (UU-vejleder)** – They're trained to help with this.
2. **Visit open house events** at different schools (called "*Åbent Hus*") to get a feel.
3. **Try a bridge course (brobygning)** if offered – short trial programs at various schools.

Would you like help comparing schools near where you live or want ideas based on your hobbies or favorite subjects?
