

Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Peru. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing a bit about yourself — that's a really exciting stage to be in! Since you've just finished primary school (folkeskolen) in Denmark and are considering your next steps, let's break down the main paths you can take and what might be a good fit depending on your interests, strengths, and goals.

🎓 1. Gymnasium (STX, HHX, HTX, HF) – Academic Upper Secondary Education

These are 2–3-year academic programs that prepare you for university. Here's a quick guide:

STX (Alment Gymnasium)

- General and broad (humanities, natural sciences, languages, social sciences).
- Good if you're unsure what you want to study later, but want to keep doors open.
- Leads well into universities.

HHX (Handelsskolen)

- Focus on business, economics, and international trade.
- Great if you like economics, languages, or see yourself in business.

HTX (Teknisk Gymnasium)

- Focus on science, technology, and IT.
- Good if you're into STEM, engineering, or innovation.

HF (Højere Forberedelseseksamen)

- A 2-year program with a more practical approach.
- Often used by people who want a shorter academic route before higher education (e.g. to become a nurse, teacher, etc.).

👉 **Recommended if:** You enjoy schoolwork and might want to go to university later.

🔧 2. Erhvervsuddannelse (EUD) – Vocational Education and Training

This is more hands-on and job-focused. You split time between school and apprenticeship (praktik). You graduate as a trained professional (like electrician, hairdresser, carpenter, IT supporter, social worker

assistant, etc.)

👉 **Recommended if:** You like practical learning, want to work sooner, or have a clear trade or profession you're passionate about.

Bonus: You can still take an EUX (vocational + academic hybrid) if you also want the option to study at a university later.

3. International Opportunities

Since you're of Peruvian background and fluent in Danish, you already have a multicultural advantage. You might consider:

- **Studying Spanish formally** – could give you a major edge later in jobs or translation/interpreting.
- **Exchange programs** (after you start gymnasium or vocational training).
- **International Business or International Baccalaureate (IB)** in Denmark if your English is strong.

❓ Questions to ask yourself:

- Do you enjoy academic subjects like math, science, or literature?
- Are you more interested in learning through doing (hands-on), or through reading and lectures?
- Do you already have a career dream (e.g. doctor, engineer, chef, game developer)?
- Would you prefer to work soon, or continue studying?

My general recommendation (based on your background and options):

Since you're fluent in Danish, and presumably have a strong cultural understanding of both Denmark and Peru, **a broad academic path like STX or HHX** might be ideal — it gives you time to figure out what you love and opens many doors.

If you're more practical or know what you want, consider **EUD or EUX** with a focus you care about — you'll be job-ready sooner and still have future study options.

If you tell me what subjects you like or what careers interest you, I can give more tailored suggestions!
