

Uddannelsesmuligheder i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Samoa. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

That's a great place to be—right at the beginning of deciding your future. Since you've just finished primary school in Denmark (which typically ends after 9th or 10th grade), you now have a few main educational paths you can choose from. The best path depends on your interests, strengths, and what kind of career or life you'd like to aim for. I'll walk you through your main options and who each one might suit best:

1. Gymnasiale Uddannelser (General Upper Secondary Education)

This is a common next step for many students and prepares you for university.

Options:

- **STX (Studentereksamen)** – Focus on general academic subjects like languages, sciences, and humanities.
- **HHX (Higher Commercial Examination Programme)** – Focus on business, economics, and marketing.
- **HTX (Higher Technical Examination Programme)** – Focus on science, technology, and design.
- **HF (Higher Preparatory Examination)** – Shorter, 2-year academic program (more for students who didn't go directly after 9th grade).

Good if:

- You're academically inclined.
- You enjoy subjects like math, science, social studies, or languages.
- You're thinking about university later (e.g. law, engineering, teaching, medicine, etc.).

2. Erhvervsuddannelser (Vocational Education and Training - EUD)

This combines school and apprenticeships with a focus on practical skills. After you complete EUD, you can get a job right away—or continue on to higher education (via **EUX**).

Examples:

- Electrician, carpenter, mechanic, chef, social worker, hairdresser, IT technician, etc.

Good if:

- You enjoy hands-on work and want to enter the workforce earlier.
- You prefer learning by doing rather than sitting in a classroom all day.
- You might want to start working soon or learn a trade skill.

3. EUX – A mix of vocational training and general education

EUX allows you to **both learn a trade** and **get qualifications to study further** (university, etc.). It's more demanding than EUD because you're doing both at once, but it opens more doors.

Good if:

- You want the best of both worlds—practical job skills *and* future education opportunities.
- You're ambitious and can handle a higher workload.

Things to Think About:

Ask yourself:

- Do I like school and studying theory? Or do I prefer practical work?
- Do I want to go to university?
- Am I interested in a specific field already (e.g., tech, health, business, construction)?
- Do I want to work soon or study longer?

As a person with a Samoan background in Denmark...

It can be powerful to pursue something where **your background is a strength**—for example:

- International business, culture, or tourism (using your multicultural background).
- Helping professions like teaching, social work, or healthcare, where diversity is a big asset.
- Tech or vocational fields where skilled professionals are always needed in Denmark.

My Recommendation (Based on What You've Said So Far):

Since you just finished primary school and are fluent in Danish, I'd suggest:

- **STX** or **HTX** if you're academically interested and want many options later.
- **EUX** if you like practical skills but also want to keep university open as a future path.
- **EUD** if you're sure you want to work with your hands or enter a trade sooner.

Would you like help figuring out what you might enjoy most based on your interests? I can ask you a few questions to narrow it down.
