

Uddannelsesmuligheder efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Seychelles. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

That's great that you're fluent in Danish and have just completed primary school – you're at an exciting stage with lots of options ahead!

In Denmark, after finishing **primary school (folkeskole)** at around age 15–16, you usually choose between a few different **youth education paths** depending on your interests, learning style, and career goals.

Here's a breakdown of the **main options** you can consider:

🎓 1. General Upper Secondary Education (Gymnasiale Uddannelser)

These are academic programs that prepare you for higher education (like university):

a) STX (Studentereksamen)

- Most traditional academic program.
- Broad mix of subjects (sciences, humanities, social sciences).
- Good if you're not sure what you want yet.

b) HHX (Higher Commercial Examination)

- Focus on business, economics, international trade.
- Great if you're interested in business, entrepreneurship, or marketing.

c) HTX (Higher Technical Examination)

- Focus on science, technology, and engineering.
- Good for practical science or technical interests.

d) HF (Higher Preparatory Examination)

- A 2-year alternative, often for more mature or focused students.
- Slightly more flexible path to university or higher education.

➡ **Recommended if:** You like academic subjects, want to keep your options open for university, or aim for careers in fields like law, science, business, or teaching.

2. Vocational Education and Training (Erhvervsuddannelser - EUD)

- Combines school and work experience (apprenticeship).
- You learn a trade and can become a **plumber, electrician, chef, hairdresser**, IT technician, or even work in healthcare.
- Takes about 3-5 years.

➔ **Recommended if:** You prefer hands-on learning, want to start working earlier, or are interested in a skilled trade or technical field.

3. EUX – The Best of Both Worlds

- Combines **vocational training** with a **general upper secondary level** education.
- You can get both a trade qualification and access to university.

➔ **Recommended if:** You want practical skills **and** the option to study at university later.

Your background: A strength!

Being from a multicultural background (Seychellois and Danish) can be a **huge asset**, especially in areas like:

- **Languages and communication**
- **International business**
- **Tourism and hospitality**
- **Social work or education**
- **Cultural mediation or diplomacy**

So, what should you do?

Here are a few steps to help you decide:

1. **Think about your interests:** Do you enjoy science, languages, working with people, or building things?
2. **Talk to your school counselor (studievejleder):** They can guide you based on your grades, interests, and personality.
3. **Visit open houses (Åbent Hus)** at local gymnasiums or vocational schools.
4. **Try a "brobygning" or internship:** Many schools offer short trial programs.

If you're still unsure...

A good "safe path" for many 16-year-olds is **STX** – it gives you broad academic knowledge and time to figure out what you want. But if you're more practical or want to work sooner, **EUD or EUX** could be

perfect.

If you tell me what subjects or types of activities you enjoy, I can help you narrow it down further.
