

Uddannelsesvalg efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Solomon Islands. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing that! It's great that you're thinking seriously about your next step—especially right after finishing primary school. Since you're 16 and have completed primary school in Denmark, you're at an important decision point in the Danish education system. Let's break down your options and what might suit you best based on your background and possible goals.

🎓 Your Main Options After Primary School in Denmark

At your stage, you typically choose between **general upper secondary education** or **vocational education and training**. Here are the most common paths:

1. Gymnasiale Uddannelser (General Upper Secondary Education)

These are academic, 3-year programs that prepare you for higher education like university.

Main types:

- **STX (Almen studentereksamen)** – Broad and traditional academic focus (languages, social sciences, natural sciences).
- **HHX (Højere handelseksamen)** – Focus on business, economics, and marketing.
- **HTX (Højere teknisk eksamen)** – Focus on technology, science, and engineering.
- **HF (Højere forberedelseksamen)** – 2-year program, more practical and shorter, often for people who want a quicker route to higher education.

Best for you if:

- You enjoy school subjects like languages, science, or social studies.
- You might want to go to university or a higher education institution later on.

2. Erhvervsuddannelse (Vocational Education and Training, EUD)

This is a more practical path that mixes school and internships. It usually takes 3–5 years, and you learn a specific trade or profession.

Examples:

- Electrician, carpenter, mechanic
- Health care worker, child care assistant
- IT support, web developer
- Chef, baker

Best for you if:

- You prefer hands-on learning and want to work sooner.
- You're interested in a skilled trade or applied profession.

You can still pursue higher education after EUD, especially if you take the **EUX** route (a combination of vocational training and academic courses).

Things to Think About When Choosing

Ask yourself:

- Do I enjoy studying theory, or do I prefer practical, hands-on work?
- Am I curious about specific subjects (science, tech, business, etc.)?
- Do I want to go to university eventually?
- Would I rather start working earlier?

Your Cultural Background – A Strength

Coming from a Solomon Islands background while being fluent in Danish is a real asset. You could consider paths that value intercultural understanding, such as:

- **Global studies, social sciences, or communication** (via STX or HF)
- **Business and international trade** (via HHX)
- **Tourism or hospitality** (via vocational programs)

Your multilingual and multicultural background could also help in:

- **Diplomacy / international relations**
- **NGOs / development work**
- **Language and culture teaching or translation**

My Recommendation (based on your info)

If you like studying and might want to go to university later:

STX (for broad options) or **HHX** (if you like business/economics).

If you prefer practical learning and want job skills sooner:

EUX is a great middle-ground. You can learn a trade *and* still qualify for university later.

If you're unsure:

HF is shorter (2 years), more flexible, and often good for students who want time to figure out their path.

Would you like help comparing specific schools or programs in your area? Or are you still trying to figure out your interests?
