

Uddannelsesvalg efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Switzerland. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing your background — it's a great starting point. Since you've just finished primary school in Denmark (which typically ends around age 15–16), your next step is usually one of the upper secondary education options. The right path depends on your interests, strengths, and future goals. Here's a breakdown of your main options in Denmark, along with some thoughts tailored to your situation:

1. Gymnasiale uddannelser (General upper secondary education)

These are great if you're interested in going to university later on.

Most common options:

- **STX (Almen studentereksamen):** Broad and academic. Strong focus on humanities, natural sciences, and social sciences.
- **HHX (Højere handelseksamen):** Focus on business, economics, and marketing. Good for business careers.
- **HTX (Højere teknisk eksamen):** Focus on science, tech, and IT.
- **HF (Højere forberedelseksamen):** Shorter 2-year option, more practical and flexible, ideal if you're unsure or want a faster route to university.

Good fit if:

- You're considering university in Denmark or Switzerland later.
- You enjoy academic subjects like languages, science, or social studies.
- You want to keep your options open.

2. Erhvervsuddannelser (Vocational education and training - EUD)

Practical education that leads directly to a trade or profession.

- You can train to become a carpenter, mechanic, chef, IT supporter, healthcare assistant, etc.
- Combines school and apprenticeships ("praktik") in a company.
- You can still take further education after, especially if you add EUX (a combo of vocational + academic).

Good fit if:

- You prefer hands-on learning.
- You already know you want a job that doesn't need university.
- You want to earn money sooner.

Other paths to consider:

- **EUX** (a hybrid of vocational + academic): A strong option if you want a trade but still want access to university later.
- **International schools or boarding schools (efterskole, højskole)**: Some offer a gap year-like experience or international focus — especially useful if you're curious about Swiss culture/language or want to strengthen your English/German/French.
- **Studying in Switzerland in the future**: If that's on your radar, STX or HTX gives you good preparation. Switzerland has a strong vocational system too, so their options can align with Danish ones.

Special note given your Swiss background:

- If you speak or understand **German, French or Italian**, it's a huge asset — both for jobs and possibly studying or working in Switzerland someday.
- You could consider building that language skill further — maybe through electives or summer programs.

Final questions to help narrow it down:

- Are you more into theory (like history or biology) or practice (like cooking, fixing machines, working with people)?
- Do you enjoy school now, or are you itching to work and earn money?
- Would you like to study at a university someday, or do you prefer a faster route to a job?

Let me know your thoughts on that, and I can help narrow the recommendations even more.
