

Uddannelsesvalg efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Timor-Leste. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

That's great that you're thinking ahead about your future—being 16, fluent in Danish, and having completed primary school in Denmark gives you a strong foundation to build on. Since you've just finished **primary school**, the next natural step in Denmark's education system is to choose a **youth education path**. Let's go over your options and how to choose the right one for you:

1. General Upper Secondary Education (Gymnasiale Uddannelser)

This is the academic route, preparing you for university.

- **STX (Studentereksamen):** Broad academic education – good if you're interested in subjects like science, humanities, or social studies.
- **HHX (Higher Commercial Examination):** Focus on business, economics, and international trade – good if you're into commerce or want to start a business someday.
- **HTX (Higher Technical Examination):** Focus on science and technology – great if you like math, programming, or engineering.
- **HF (Higher Preparatory Examination):** A shorter 2-year program, more flexible and practical – often used by those who want to pursue specific vocational or health-related education afterward.

✓ Best if:

You enjoy academic learning, want to go to university later, and aren't yet sure what field you want to work in.

2. Vocational Education and Training (Erhvervsuddannelser / EUD)

This is a practical route that combines school and apprenticeship.

You train for a **specific career** (like electrician, carpenter, hairdresser, chef, social worker, or IT specialist). You can always continue your education later through *EUX* or other adult education options.

✓ Best if:

You want to **start working sooner**, prefer hands-on learning, or already have an idea of what kind of job you want.

How to Choose?

Here are a few guiding questions:

- Do you like **school subjects**, or do you prefer **doing things with your hands**?
 - Do you want to go to **university one day**, or start working after 3–4 years?
 - What are your **interests**? (e.g., business, technology, social work, arts, healthcare?)
 - Would you enjoy a **mix of work and study** (EUD), or mostly school-based learning (STX/HHX/HTX)?
-

My Suggestion (Based on What You've Shared)

Since you're fluent in Danish, born and raised in Denmark, and just finishing primary school:

- If you're academically curious and not sure what you want to do yet, **STX or HHX** is a good path to keep many doors open.
 - If you already know what kind of job you want (like mechanic, chef, IT technician, or hairdresser), then **EUD** might be perfect.
 - If you're somewhere in between, **EUX** (a combination of vocational and academic education) might be a strong fit.
-

Tip

You can also attend an **efterskole** for one year (many 9th and 10th graders do this). It can be a great personal experience and help you decide on your future path.

If you tell me more about your **interests**, hobbies, and strengths (subjects you like, things you enjoy doing), I can give you a more personalized recommendation.
