

Uddannelsesvejledning for ung dansker

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from United States. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing your background! Since you've just finished **primary school in Denmark** (which typically means 9th or 10th grade), you're at a key decision point in the Danish education system. Your next step depends a bit on your **interests, career goals**, and whether you might consider **studying or working internationally** in the future (like in the US).

Here are the main **educational paths** available in Denmark after primary school, with some guidance based on your background:

🎓 1. Gymnasium (STX, HHX, HTX) – General Upper Secondary Education

Best if: You enjoy academic subjects and are considering university later.

- **STX** (Alment Gymnasium): Broad focus – humanities, sciences, social sciences.
 - Good if you're not sure what you want yet.
- **HHX** (Business Gymnasium): Focus on business, economics, international trade.
 - Strong if you're interested in business or international careers.
- **HTX** (Technical Gymnasium): Focus on science, technology, IT, engineering.
 - Good if you like STEM.

● Why it might suit you:

- Keeps doors open to **university in Denmark or abroad** (like the US).
- You're fluent in Danish but also likely strong in English due to your American background – a big advantage, especially in HHX.

🔧 2. EUD/Erhvervsuddannelse (Vocational Education)

Best if: You prefer hands-on work and want to start a skilled job (e.g. electrician, mechanic, carpenter, chef).

- Combines school with apprenticeship.
- Takes 2–4 years.
- Can sometimes lead to "Erhvervsakademi" or even university later.

● Why it might suit you:

- Great if you're practical and want to start working sooner.
- Not the best path if you think you might study in the US later (harder to transfer vocational education abroad).

3. EUX – Vocational + Academic Mix

Best if: You want the **practical skills of EUD** *and* the **option to go to university** later.

- Longer and more demanding, but gives you a **studentereksamen** as well as a trade certificate.
- Example: Electrician + math & Danish at gymnasium level.

Why it might suit you:

- Keeps many doors open, combines theory + practice.
- Might be a smart choice if you're unsure between work and further studies.

4. International Options (IB – International Baccalaureate)

Best if: You're considering **studying in the US** or abroad later.

- Taught in English.
- Very academic and demanding.
- Recognized internationally (including in the US and EU).

Why it might suit you:

- You have an American background – IB is familiar to many US universities.
- If you're strong academically and want a challenge.

Questions to Ask Yourself

To help decide, ask:

1. Do I want to go to **university**? (In Denmark or abroad?)
2. Do I enjoy **theoretical subjects** or prefer **hands-on learning**?
3. Am I interested in a **specific field** like business, tech, health, or design?
4. Would I consider living/studying in the **United States** later?

Recommendation Summary

If you're **still exploring** and want to keep most doors open:

- ✓ **STX or HHX** – if you're more academic or internationally minded.
- ✓ **IB** – if you may go to college in the US.
- ✓ **EUX** – if you want both practical experience and the option for higher education.

If you want, I can help you compare specific schools or study directions near you. Just let me know where in Denmark you live or what you're most interested in!
