

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Micronesia (Federated States of). I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.
What educational path would you recommend for me?

Thanks for sharing your background – it's great that you've finished primary school and are already thinking seriously about your next steps. In Denmark, you have several good options after primary school (folkeskolen), and your choice should depend on your interests, strengths, and long-term goals. Here's a breakdown of your main paths:

🎓 1. Gymnasiale uddannelser (Upper Secondary Education)

These are academic paths that prepare you for university.

Options:

- **STX (Almen studentereksamen)** – general high school, broad subjects (math, science, language, humanities).
- **HHX (Højere handelseksamen)** – business-focused, good if you like economics, marketing, or international trade.
- **HTX (Højere teknisk eksamen)** – technical focus, great if you're into science, IT, engineering, or technology.
- **HF (Højere forberedelseksamen)** – shorter (2 years), good if you want more flexibility or had a harder time in folkeskolen.

Recommended if: You're interested in going to university later or enjoy academic subjects.

🔧 2. Erhvervsuddannelser (Vocational Education and Training – EUD)

This is a practical path combining school and paid apprenticeships in a company.

Examples:

- Electrician
- Carpenter
- Hairdresser
- Chef
- Health care assistant

You earn money while you learn and often get a job quickly.

Recommended if: You like hands-on work and want to get into a career quickly without going to university.

If You're Unsure

You can take a **10th grade (10. klasse)** year at an efterskole or a 10th grade center. It gives you extra time to explore what you want, meet new people, and often includes career guidance.

Additional Thoughts Based on Your Background

- You're fluent in Danish, which is a strong advantage.
 - Your Micronesian roots could be an asset if you want to study international relations, languages, or global trade – especially through HHX.
 - Denmark values diversity, and scholarships or support might be available if you later pursue higher education.
-

My Suggestion:

If you like school and think you might want a university degree in the future:

➡ **Go for STX or HHX.**

If you're more into doing things with your hands and want to work sooner:

➡ **Start a vocational education (EUD).**

If you're not ready to choose:

➡ **Take 10th grade to figure it out.**

Would you like help figuring out what subjects or careers you're most interested in? I can give you a small quiz or list of interests to help guide your choice.
